

## Plastic bag chair

Here is a design of a chair made out of recycled plastic shopping bags; I have done this by bonding the bags together with an iron, I then padded the chair with netting to make it comfortable. I liked the idea of reusing everyday items and transforming them into something original. I had this idea for this chair after making the wrapper chair. I first started off using different kinds of plastic bags, but found that it was too overpowering, and needed to have a set colour. I then chose a colour that stood out from the chair, this was orange. I then recovered the chair over the top so you can still see some of the existing colours. I like how the writing on the bags was showing through so I decided to put white spots on the chair, this gave the chair character
